EXEC-02 | Therapist only - all age groups

Breaking down tasks and planning time

1 | Purpose, fit and boundaries

Purpose of this unit

Turn a chosen task into a short sequence of visible steps and plan time with buffers and breaks. A time estimate is a hypothesis to explore; exceeding it provides information, not a score for diligence or ability.

Choice and adaptation

Choose this sheet following professional assessment and with consent. The person may skip questions, answer aloud, or choose another tool. This is proposed original material for review; it provides no score, diagnosis, or promise of an outcome.

Boundaries specific to this unit

Do not use this sheet to diagnose ADHD, change treatment or cancel accommodations. An unclear, impossible or inaccessible task requires exploration and support. Do not reduce rest or neglect bodily needs to meet a plan.

Reusing existing material

EXEC-01 helps prepare a start. Use the chosen task and add step order, time and buffers; CORE-05 remains suitable for a general action plan.

A fictional example for discussion

Fictional example: Ido wants to pack a bag for an activity. He chooses to check what is needed, lay out the equipment and pack it. After one try, he discovers that finding the bottle takes extra time.

> Draft for administrator review. Clinical review and final rights approval are still pending.

Mindful Path

Working together with the worksheet

2 | A conversation about one situation

Opening

Choose a situation the person wants to explore. It need not be the hardest situation. Check that the question is understood and the wording fits the person; their account comes before the therapist's interpretation.

1 | Question for discussion

What result is required in my chosen task?

2 | Question for discussion

What steps depend on one another, and what does each need?

3 | Question for discussion

How much time will I allow for each step, and on what basis?

4 | Question for discussion

What buffer fits the constraints and breaks?

5 | Question for discussion

What are the priorities if the plan changes?

Closing

Summarize what became clearer and what remains open. Use the existing SES-S01 and SES-S02 for the session framework. There is no need to repeat an assessment or plan already recorded.

Possible difficulties

Too much detail can become another task. Start with a few steps; if timing information is missing, make a rough estimate and explore it without timing every action.

Mindful Path

EXEC-02 | Therapist only - all age groups

Adapting for four age groups

3 | Age is a starting point, not an assumption about ability

CH | Children, approximately ages 6 to 11

Offer two or three steps that can be pointed to or drawn. The adult is responsible for clear requirements and reasonable time, not comparisons between children.

Offer one question at a time with little writing. Adult support must not replace the child's own voice.

TE | Adolescents, approximately ages 12 to 17

Let adolescents choose planning methods and what to share. Clarify actual deadlines and other commitments; do not turn the sheet into a report for parents.

Agree in advance what will be shared and with whom, and explain the privacy limits in this setting. Do not promise absolute confidentiality.

AD | Adults

Include preparation, travel, caring for others and dependencies on colleagues. Requesting a deadline change can be a planned step, subject to commitments.

OA | Older adults

Respect the pace and preferences the person describes. Do not infer a need for help from age or transfer task management to a companion without consent.

Offer reading support, time, and conversation according to preference. Choose help from another person together with the participant, respecting their privacy.

> Each age version needs its own review. Approval of one version does not automatically approve the others.

Practice, review and next steps

4 | Shared choice and learning from the attempt

Before offering practice sheet P

Choose a safe everyday task and only a small part of it. Set a stopping point and breaks as needed; finishing the whole task or timing it is unnecessary if measurement adds burden.

At the next session

Check whether breaking down the task helped understanding and what affected the time. Keep needed buffers and update one estimate, without making timing accuracy a goal in itself.

Professional and technical records

Each version has a separate review record covering age suitability, originality, rights, and fictional filling. Reviewer and date fields remain blank until assigned. File checks or a code merge are not clinical approval. Clinical information stays only in the authorized setting, outside the code repository.

Background references

The following links were used for background only. Questions and adaptations were written afresh for the expansion plan; no questionnaire, scale, or protocol was copied. Adult sources do not validate the child versions. This material makes no claim about session count or treatment effectiveness.
