EXEC-03 | Therapist only - all age groups

Adapting surroundings and reminders

1 | Purpose, fit and boundaries

Purpose of this unit

Explore how environmental conditions and one aid can support a task. The person chooses what helps and what interferes; the aim is useful adaptation, not one environment everyone must work in.

Choice and adaptation

Choose this sheet following professional assessment and with consent. The person may skip questions, answer aloud, or choose another tool. This is proposed original material for review; it provides no score, diagnosis, or promise of an outcome.

Boundaries specific to this unit

Do not remove accessibility aids, safety alerts or essential contact. Do not monitor, block a device or share a reminder board without consent. Preferences for sensory input, movement or quiet are not a diagnosis.

Reusing existing material

EXEC-01 identifies conditions for starting. Here explore one change, a reminder method and how much others can see; EXEC-02 fits difficulties mainly involving sequence or time.

A fictional example for discussion

Fictional example: Michal wants to remember a notebook for a meeting. She chooses a note beside her bag instead of three phone alerts and checks whether she sees it when leaving.

> Draft for administrator review. Clinical review and final rights approval are still pending.

Mindful Path

Working together with the worksheet

2 | A conversation about one situation

Opening

Choose a situation the person wants to explore. It need not be the hardest situation. Check that the question is understood and the wording fits the person; their account comes before the therapist's interpretation.

1 | Question for discussion

What environmental conditions affect the task?

2 | Question for discussion

What possible change is within my control?

3 | Question for discussion

What aid or reminder method will I explore first?

4 | Question for discussion

What is needed for coordination, privacy and accessibility?

5 | Question for discussion

What sign will I use to check the fit?

Closing

Summarize what became clearer and what remains open. Use the existing SES-S01 and SES-S02 for the session framework. There is no need to repeat an assessment or plan already recorded.

Possible difficulties

Too many reminders can add burden. If an aid is inaccessible or outside the person's control, seek adaptation with the appropriate party instead of making them responsible for unavailable conditions.

Mindful Path

EXEC-03 | Therapist only - all age groups

Adapting for four age groups

3 | Age is a starting point, not an assumption about ability

CH | Children, approximately ages 6 to 11

Let the child choose among a few concrete options. The adult arranges safe conditions and listens to sensory reactions; do not force quiet or sitting still.

Offer one question at a time with little writing. Adult support must not replace the child's own voice.

TE | Adolescents, approximately ages 12 to 17

A reminder may be private, written or take another form. Do not assume a shared board, app or confiscated phone suits an adolescent.

Agree in advance what will be shared and with whom, and explain the privacy limits in this setting. Do not promise absolute confidentiality.

AD | Adults

Check permission for workplace changes, site constraints and costs. A simple available aid may suit better than a new system.

OA | Older adults

Ask whether the person prefers a digital aid, paper or conversation. Offer explanations with consent, without assuming technological difficulty or declining memory.

Offer reading support, time, and conversation according to preference. Choose help from another person together with the participant, respecting their privacy.

> Each age version needs its own review. Approval of one version does not automatically approve the others.

Practice, review and next steps

4 | Shared choice and learning from the attempt

Before offering practice sheet P

Choose one reversible change and an aid the person agrees to. Safety- or treatment-related reminders are outside this experiment; do not change them through this sheet.

At the next session

Compare comfort, effort and usefulness in the same kind of task. An unhelpful adaptation provides information; change or stop it rather than requiring persistence with the aid itself.

Professional and technical records

Each version has a separate review record covering age suitability, originality, rights, and fictional filling. Reviewer and date fields remain blank until assigned. File checks or a code merge are not clinical approval. Clinical information stays only in the authorized setting, outside the code repository.

Background references

The following links were used for background only. Questions and adaptations were written afresh for the expansion plan; no questionnaire, scale, or protocol was copied. Adult sources do not validate the child versions. This material makes no claim about session count or treatment effectiveness.
