EXEC-05 | Therapist only - all age groups

Persistence and changing a plan

1 | Purpose, fit and boundaries

Purpose of this unit

Identify when a plan remains useful and when workload, sequence or support needs changing. Use a brief review point to choose continuation, a break or new arrangements.

Choice and adaptation

Choose this sheet following professional assessment and with consent. The person may skip questions, answer aloud, or choose another tool. This is proposed original material for review; it provides no score, diagnosis, or promise of an outcome.

Boundaries specific to this unit

Do not make performance streaks, punishment or forced monitoring a goal. A break is not failure. Coordinate changes to binding requirements with the appropriate party; do not compromise safety to maintain a streak.

Reusing existing material

EXEC-02 provides initial planning, and EXEC-03 adapts aids. Here focus on decisions during change or interruption; CORE-06 is available for broader problem solving.

A fictional example for discussion

Fictional example: Uri plans to organize a shelf, but an urgent call interrupts. At the review point, he chooses to finish just one part and arrange another time for the rest.

> Draft for administrator review. Clinical review and final rights approval are still pending.

Mindful Path

Working together with the worksheet

2 | A conversation about one situation

Opening

Choose a situation the person wants to explore. It need not be the hardest situation. Check that the question is understood and the wording fits the person; their account comes before the therapist's interpretation.

1 | Question for discussion

At what review point in the plan am I?

2 | Question for discussion

What progressed, and what is delaying the next step?

3 | Question for discussion

Are the workload and support still suitable?

4 | Question for discussion

What is better now: continuing, pausing or adapting?

5 | Question for discussion

What will I update, and with whom will I coordinate?

Closing

Summarize what became clearer and what remains open. Use the existing SES-S01 and SES-S02 for the session framework. There is no need to repeat an assessment or plan already recorded.

Possible difficulties

Too-frequent checking can interrupt the task. Choose one natural point. If the plan repeatedly burdens the person, assess the demand's fit before adding tracking tools.

Mindful Path

EXEC-05 | Therapist only - all age groups

Adapting for four age groups

3 | Age is a starting point, not an assumption about ability

CH | Children, approximately ages 6 to 11

Review one completed action with the child. Help them choose a break or support without turning the sheet into a rewards-and-punishments chart.

Offer one question at a time with little writing. Adult support must not replace the child's own voice.

TE | Adolescents, approximately ages 12 to 17

Choose a brief review the adolescent wants. Daily reporting is not required; success may include reducing a task or coordinating a deadline.

Agree in advance what will be shared and with whom, and explain the privacy limits in this setting. Do not promise absolute confidentiality.

AD | Adults

Include commitments to others and working conditions. Brief records support practical decisions, not employee performance evaluation.

OA | Older adults

Adapt the plan to the person's priorities, not a companion's. Preserving a hobby or rest may be a central choice.

Offer reading support, time, and conversation according to preference. Choose help from another person together with the participant, respecting their privacy.

> Each age version needs its own review. Approval of one version does not automatically approve the others.

Practice, review and next steps

4 | Shared choice and learning from the attempt

Before offering practice sheet P

Plan one review point at an agreed time or after a significant change. A daily streak is not required; bring a case where a break was chosen instead of continuation too.

At the next session

Explore how the change was chosen and whether it supported the goal and needs. Avoid summaries based only on quantity; listen to costs, conditions and choice.

Professional and technical records

Each version has a separate review record covering age suitability, originality, rights, and fictional filling. Reviewer and date fields remain blank until assigned. File checks or a code merge are not clinical approval. Clinical information stays only in the authorized setting, outside the code repository.

Background references

The following links were used for background only. Questions and adaptations were written afresh for the expansion plan; no questionnaire, scale, or protocol was copied. Adult sources do not validate the child versions. This material makes no claim about session count or treatment effectiveness.
