SCREEN-02 | Therapist only - all age groups

Situation, trigger, and digital habit

1 | Purpose, fit and boundaries

Purpose of this unit

Explore a particular digital use through its context, the need it serves, and its effect on functioning. The outcome is a small point of choice, without diagnosing addiction or judging by minutes alone.

Choice and adaptation

Choose this sheet following professional assessment and with consent. The person may skip questions, answer aloud, or choose another tool. This is proposed original material for review; it provides no score, diagnosis, or promise of an outcome.

Boundaries specific to this unit

Do not require passwords, screenshots of correspondence, or private content. There is no uniform time limit or withdrawal of accessibility tools or essential contact. Online harm or significant difficulty functioning requires appropriate assessment and support.

Reusing existing material

SCREEN-01 identifies benefits and a wish for balance. Here, map one situation before and during use; there is no continuous diary or covert monitoring.

A fictional example for discussion

Fictional example: While Maya waits for a ride, she repeatedly opens an app. In conversation, she identifies that she is seeking connection; she chooses to explore one moment without recording every use during the day.

> Draft for administrator review. Clinical review and final rights approval are still pending.

Mindful Path

Working together with the worksheet

2 | A conversation about one situation

Opening

Choose a situation the person wants to explore. It need not be the hardest situation. Check that the question is understood and the wording fits the person; their account comes before the therapist's interpretation.

1 | Question for discussion

What sequence of situation and digital use recurs for me?

2 | Question for discussion

What demand, feeling, or notification starts it?

3 | Question for discussion

What is the immediate benefit and the later cost?

4 | Question for discussion

What relates to work or an essential need, and what to habit?

5 | Question for discussion

What decision point can be explored on a limited basis?

Closing

Summarize what became clearer and what remains open. Use the existing SES-S01 and SES-S02 for the session framework. There is no need to repeat an assessment or plan already recorded.

Possible difficulties

If observation becomes burdensome monitoring, reduce it to one event recalled in the session. Counting openings or comparing with others is unnecessary.

Mindful Path

SCREEN-02 | Therapist only - all age groups

Adapting for four age groups

3 | Age is a starting point, not an assumption about ability

CH | Children, approximately ages 6 to 11

The child describes one activity and is not tested on screen time. An adult is responsible for safety and age suitability; do not demand proof by revealing messages.

Offer one question at a time with little writing. Adult support must not replace the child's own voice.

TE | Adolescents, approximately ages 12 to 17

Distinguish social connection, study, and entertainment. Respect privacy and do not infer addiction or loss of control from every prolonged use.

Agree in advance what will be shared and with whom, and explain the privacy limits in this setting. Do not promise absolute confidentiality.

AD | Adults

Separate work demands, caregiving, and accessibility tools from a chosen habit. Explore practical conditions instead of presenting use as a willpower problem.

OA | Older adults

Ask about benefit and preference without assuming technological difficulty. Any assistance should preserve the participant's control of their device and private information.

Offer reading support, time, and conversation according to preference. Choose help from another person together with the participant, respecting their privacy.

> Each age version needs its own review. Approval of one version does not automatically approve the others.

Practice, review and next steps

4 | Shared choice and learning from the attempt

Before offering practice sheet P

Choose one opportunity just to observe, without mandatory change or installing monitoring tools. It can be discussed afterward without recording in real time.

At the next session

Check what was learned about the need and context. Changes in functioning and choice matter more than time measurement alone; ongoing difficulty requires appropriate assessment.

Professional and technical records

Each version has a separate review record covering age suitability, originality, rights, and fictional filling. Reviewer and date fields remain blank until assigned. File checks or a code merge are not clinical approval. Clinical information stays only in the authorized setting, outside the code repository.

Background references

The following links were used for background only. Questions and adaptations were written afresh for the expansion plan; no questionnaire, scale, or protocol was copied. Adult sources do not validate the child versions. This material makes no claim about session count or treatment effectiveness.
