OCD-04 | For therapists | OCD, ages 8 and over

Recording an individualized plan with the therapist

1 | Purpose, fit and boundaries

Purpose of this unit

Record an already adapted treatment decision: goal, chosen task, support, boundaries and review date. The sheet does not automatically choose exposure or difficulty.

Choice and adaptation

Choose this sheet following professional assessment and with consent. The person may skip questions, answer aloud, or choose another tool. This is proposed original material for review; it provides no score, diagnosis, or promise of an outcome.

Boundaries specific to this unit

Do not undertake exposure, delay medical care, abandon necessary protection or change medication based on this form. ERP requires assessment and guidance by a skilled therapist; consent is checked throughout.

Reusing existing material

Unit 3 explores understanding and goals; this unit gathers specific agreements. ANX-04 and CORE-07 do not replace OCD formulation or professional ERP adaptation.

A fictional example for discussion

Fictional example: Dana and the therapist agree what to record after session work, who may help and when to review suitability. The sheet chooses neither an exercise nor repetitions.

> Draft for administrator review. Clinical review and final rights approval are still pending.

OCD-04 | For therapists | OCD, ages 8 and over

Working together with the worksheet

2 | A conversation about one situation

Opening

Choose a situation the person wants to explore. It need not be the hardest situation. Check that the question is understood and the wording fits the person; their account comes before the therapist's interpretation.

1 | Question for discussion

What treatment decision was adapted and recorded in the session?

2 | Question for discussion

What was defined about scope, context and professional support?

3 | Question for discussion

What response did the therapist choose to address, and what is a necessary need?

4 | Question for discussion

How will I seek clarification if the situation differs from the plan?

5 | Question for discussion

When is the review and what do we want to learn?

Closing

Summarize what became clearer and what remains open. Use the existing SES-S01 and SES-S02 for the session framework. There is no need to repeat an assessment or plan already recorded.

Possible difficulties

Do not guess unclear agreements. New danger or medical needs require separate assessment; do not label help seeking a ritual without assessment.

OCD-04 | For therapists | OCD, ages 8 and over

Adapting for four age groups

3 | Age is a starting point, not an assumption about ability

CH | Children aged 8–11 only

Ages 8–11 only. Read one question and allow a brief or spoken response. Parents add separate observations without deciding the child's thoughts; do not test reporting accuracy. Record explanation and consent briefly; no coercion or surprises.

Offer one question at a time with little writing. Adult support must not replace the child's own voice.

TE | Adolescents, approximately ages 12 to 17

Ages 12–17. Agree what stays private and what is shared with family or school, subject to safeguarding duties. Embarrassing thought content need not be disclosed. Do not share content with school without an appropriate sharing decision.

Agree in advance what will be shared and with whom, and explain the privacy limits in this setting. Do not promise absolute confidentiality.

AD | Adults

Connect work to chosen goals, family, employment and existing care. Distinguish rituals, practical needs and value-consistent behavior. Do not generate exposure instructions from blank fields.

OA | Older adults

Preserve adult language, choice and privacy. Assess access, health and desired support without automatically attributing new changes to OCD or assuming reduced ability. Access measures and medical protections are not automatically avoidance.

Offer reading support, time, and conversation according to preference. Choose help from another person together with the participant, respecting their privacy.

> Each age version needs its own review. Approval of one version does not automatically approve the others.

Practice, review and next steps

4 | Shared choice and learning from the attempt

Before offering practice sheet P

The P sheet proposes recording decisions and learning within treatment, not ERP instructions. The therapist determines suitability, action, scope and support. Without an agreed plan, use only for discussion. Do not begin exposure or change response prevention based on this sheet.

At the next session

Check that the agreement was clear, consensual and feasible. Outcome review does not instruct increasing difficulty; every change returns to shared therapist-client decision-making.

Professional and technical records

Each version has a separate review record covering age suitability, originality, rights, and fictional filling. Reviewer and date fields remain blank until assigned. File checks or a code merge are not clinical approval. Clinical information stays only in the authorized setting, outside the code repository.

Background references

The following links were used for background only. Questions and adaptations were written afresh for the expansion plan; no questionnaire, scale, or protocol was copied. Adult sources do not validate the child versions. This material makes no claim about session count or treatment effectiveness.

Treatment-manual mapping status

Mapping against a full OCD manual and professional approval remain pending. This is original support material for review, not an approved ERP manual or its replacement.
